PILAR
easy start for new users

José A. Mañas <jmanas@pilar-tools.com>

April 7, 2020

objectives

- For new users, starting a project from a white sheet is a tremendous step
- Let's start with a prepared model
- An expert prepares a base project (using PILAR standard)
 - base.mgr
- The user may
 - select assets from base.mgr
 - inherit asset valuation from base.mgr
 - inherit project options from base.mgr
 - inherit phases from base.mgr

- you may
 - only select, or not, the assets from the template
 - modify asset valuation
 - use phases from template, or modify them
 - evaluate safeguards and security profiles
- you may not
 - add / remove security domains
 - add / remove layers
 - add assets beyond those in the base
 - change asset classes

preparation steps

- let's suppose you have PILAR installed at
 - C:/Program Files (x86)/PILAR_8.1 / CIS_en.car
 - C:/Program Files (x86)/PILAR_8.1 / bib_en
- use PILAR to prepare you base project
 - MyDirectory / base.mgr
- prepare you specialized car file
 - MyDirectory / My.car

- My.car

```
base_car= C:/Program Files (x86)/PILAR_8.1/CIS_en.car
```

```
based_on= this/pattern-01.mgr
```

- in order to prepare your base.mgr,
you may copy from
 - exs_en / pattern-01.mgr
